HIGHLIGHTS AND CONCLUSIONS

HIGHLIGHTS AND CONCLUSIONS

During the past several years, Mississippi's economy has reflected many of the trends and attitudes present in the national economy. The continuing growth pattern of the civilian labor force has kept unemployment rising. After a brief decline in FY 1979, unemployment soared upwards in FY 1980 to a rate of 7.0 percent. The unemployment rate is expected to rise even higher in FY 1981 before declining somewhat in FY 1982.

Total population is projected to reach 2,480,600 individuals during FY 1982. The percentage of minorities is expected to increase slightly to represent 37.4 percent of the population. Substantial increases are estimated to occur in the 15-39 year age groups. Increases are projected to occur in all age groups of total population except persons 5-14.

The labor force growth of the past several years should continue through FY 1982. Larger numbers of youth and female workers are the major contributors to this trend. Projections indicate that 1,043,200 persons will be in the labor force in the coming fiscal year.

The only segment of employment in Mississippi which is below FY 1975 levels is Agriculture. The three largest manufacturing industries in the state are Apparel, Food and Kindred, and Lumber and Wood Products. Manufacturing employment, which represented 29.5 percent of the total establishment base in FY 1975, will represent 27.7 percent in FY 1982. This drop is a result of greater growth in nonmanufacturing employment than in the manufacturing industries.

Nonmanufacturing categories with the greatest growth during the past several years are Wholesale and Retail Trade, Service and Miscellaneous, and Government. No industry groups have lost employment since FY 1975, and only Government is expected to decline between now and FY 1982. Mainly because of high interest rates, Construction has added employment at a slower rate than any other nonmanufacturing group.

Annual occupational needs for Mississippi for 1976-1982 indicate an annual demand for 53,520 workers. The greater part of this number will be new jobs and expansions. Over one-fifth of all new jobs will be in the Operatives category. The largest number of replacement jobs is projected to occur in the Service occupations (4,690).

Most of the job openings received by offices of the Mississippi State Employment Service in CY 1980 were filled by year's end. Females outnumbered males and nonwhites outnumbered whites among available job applicants during the year. Approximately seven out of ten applicants each quarter had some work experience. Two groups, Service and Clerical and Sales, provided over 40.0 percent of the total applicants. A great number of Mississippians will enter the labor force in the semiskilled Operatives category. Many of the people applying for this type work in 1980 had no work experience. The hardest jobs to fill were in Professional, Technical and Managerial classifications. The number of persons applying for these jobs outnumbered the openings by a considerable margin.

Unemployment, which increased between 1974 and 1978, dropped in FY 1979 but rose again during FY 1980. The greatest numbers of unemployed were found in three industries: Wholesale and Retail Trade, Service, and Apparel. A rise in the unemployment rate to 7.4 percent is projected in FY 1981, but a decline is forecast for FY 1982 to a level of 6.9 percent.

In 1980, insured unemployment fluctuated throughout most of the year. Over half of the covered unemployed in the first, second, and fourth quarter were males. This trend was reversed during the third quarter as larger numbers of women were out of work. Nonwhite claimants outnumbered white claimants during the last three quarters of 1980. A large part of 1980's unemployment pattern was due to short-term mass lay-offs and seasonal work.

Unfilled job openings were highest during the first and third quarters of 1980. Most of the jobs during 1980 that were not filled were in Professional, Technical and Managerial Work. Clerical and Sales was the only field with less than half its unfilled openings remaining so for 30 days or longer. Openings which were in the Professional, Technical, and Managerial field were the hardest to fill throughout the year. In the coming year, little problem is anticipated in filling most industrial jobs. Shortages may occur in those jobs with high skill levels, expecially in rural areas. With approximately three-tenths of the total applicants available in 1980 having no experience, those jobs at entry level will continue to be very competitive. The most concern will probably be focused upon Professional, Technical, and Managerial positions which may require out-of-state recruitment in order to fill projected needs.

The growth in the state's labor force will necessitate much employment-related assistance in FY 1982. The growing numbers of youth and females entering the labor force with little or no work experience will seek assistance in finding suitable employment. Projections indicate that 64,830 of the unemployed workers will have some work experience. A good number of these experienced workers will probably have some job attachment. Many heads of families will be unemployed during the year, leaving their households without adequate income. Many older workers as well as young entrants

into the labor force will seek assistance in order to obtain suitable employment. Vietnam veterans will have a lower rate of unemployment, 4.2 percent, than the overall labor force in FY 82, but the veterans under age 30 will continue to experience high rates.

New industry and expansion of established companies will necessitate further training in skills and technology for the state's labor force. A better educated work force, knowledgeable in what jobs are available and where they are located, would increase the state's ability to cope with employment problems in the future.

Disadvantaged persons will number 771,710 in FY 1982. The majority (69.2 percent) of the state's poor will be nonwhite. Welfare recipients aged 14 and above are expected to total 139,200 in FY 1982. Approximately 68.7 percent of those families with a female head of household will exist on incomes below the poverty level. These people will not only be economically disadvantaged, but many will find it hard to obtain some type of work to raise them above poverty levels.

There will probably be 217,900 persons experiencing some degree of joblessness in this coming year. Those workers aged 16 to 24 will have the highest unemployment rates. Nonwhite females 18 to 19 years old are projected to have a rate of 37.0 percent. Many of the unemployed young people will be new entrants to the labor force who have never been able to secure steady work. A goodly share of the labor force will probably be affected by unemployment at some time during FY 1982.

The economically disadvantaged will continue to experience employment problems in FY 1982. Availability of transportation, lack of education and skills, and the location of available jobs are primary obstacles that the disadvantaged must overcome.

The state of Mississippi will probably experience a rise in the rate of unemployment during the next year. Some of the state's industries may

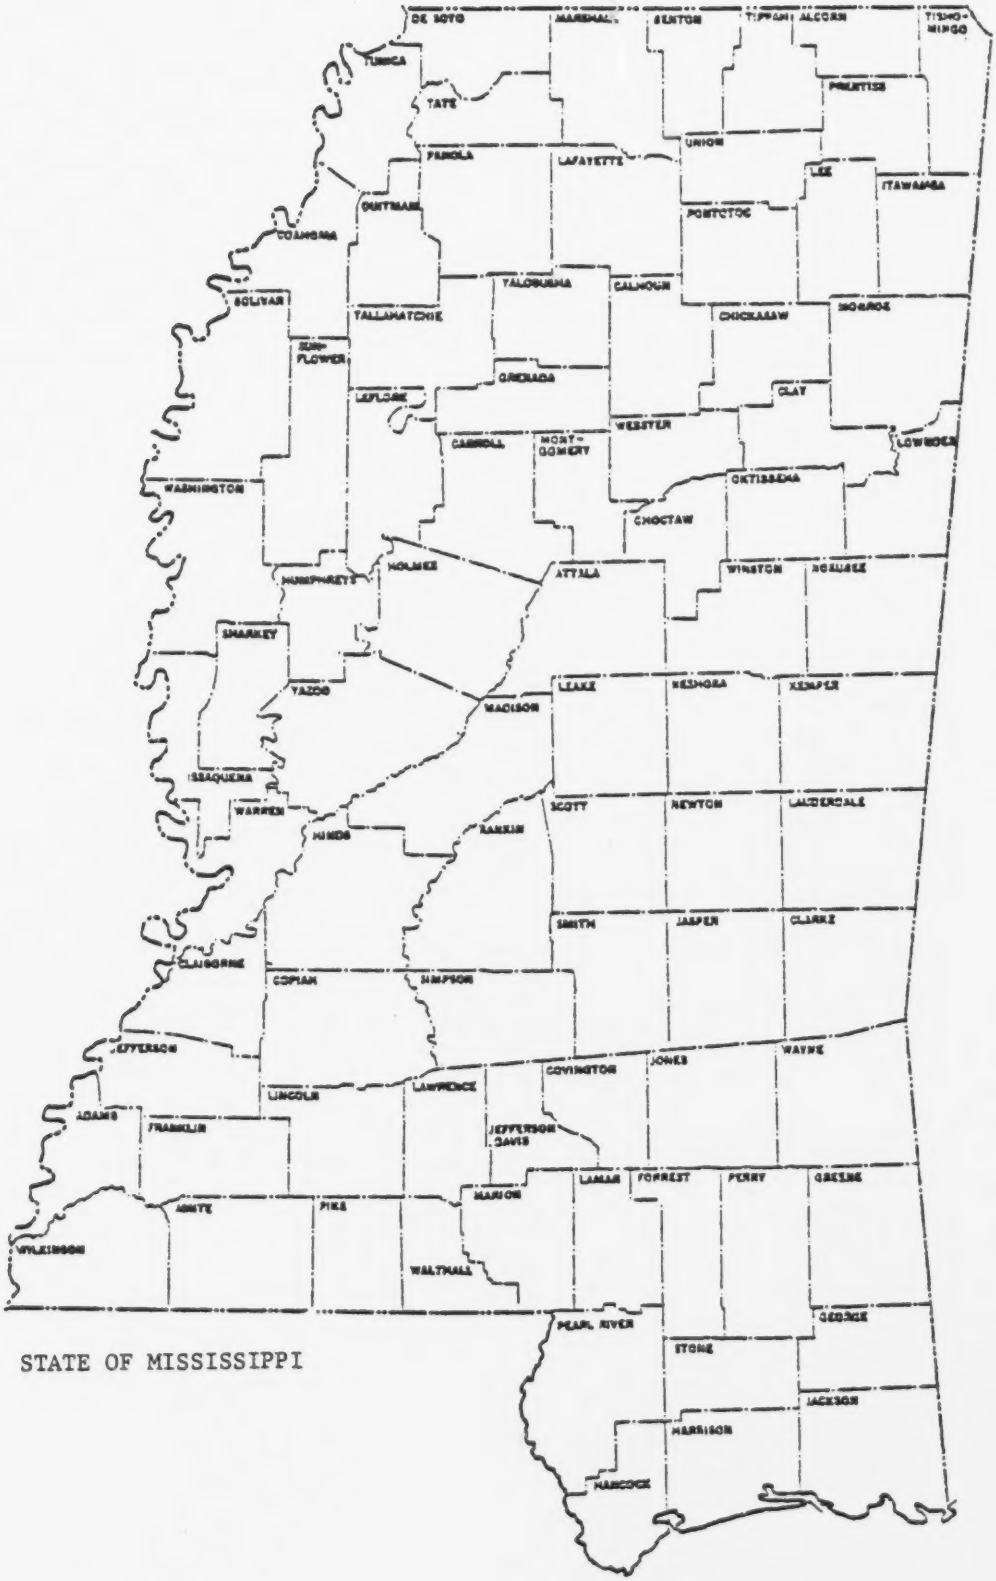
enjoy employment growth during the coming fiscal year, possibly providing job opportunities to those persons who are jobless. In FY 1982, there will probably be large numbers of young people, economically disadvantaged individuals, Vietnam veterans, and nonwhite minorities that will experience high degrees of joblessness. A steady job and adequate income will continue to be a dream rather than a reality to many Mississippians.

DEFINITION OF AREA

DEFINITION OF AREA

The State of Mississippi is composed of 82 counties ranging from the Gulf of Mexico on the south to Tennessee on the northern border, and from Alabama westward to the Mississippi River. Jackson, the capital, is the largest city, with a population of almost 154,000 in the 1970 census. The Gulf Coast area of Biloxi-Gulfport is the only other area with a population over 150,000. A majority of the state's total population is from Jackson southward to the Gulf Coast. The northern areas of the state are mostly rural and, with only a few exceptions, remain largely agricultural. Mississippi's population was 2,217,000 in 1970, and is projected to grow to 2,480,600 during FY 1982.

The State of Mississippi has three (3) CETA Prime Sponsor areas within its borders: the Jackson SMSA, Biloxi-GUlfport SMSA, and the Balance of the State.



STATE OF MISSISSIPPI

ECONOMIC DEVELOPMENTS AND OUTLOOK

ECONOMIC DEVELOPMENTS AND OUTLOOK

Mississippi's economic problems during recent years have been affected to a great extent by conditions in the national economy. Prior to 1975, industrial growth and expansion of the civilian labor force were an annual occurrence. Jobs seemed to be plentiful for persons seeking work, keeping unemployment rates relatively low. During the latter half of the 1970's, the jobless rate began to rise peaking at 7.3 percent in FY 1978. The rate declined sharply during FY 1979, but rose again to 7.0 percent for FY 1980. This unfortunate trend is expected to continue through FY 1981, before easing off slightly in FY 1982.

Total employment increased steadily between 1975 and 1980 but, with the exception of 1979, did not increase as rapidly as unemployment. Ever increasing numbers of the population have been forced by rising costs to enter or reenter the labor force in search of work. The employing community simply has not been able to absorb all of the labor force increases, sending the number of persons unable to find work well above previous levels.

The economic misfortunes of the latter 1970's are expected to continue to plague Mississippi in the early 1980's. FY 1981 is expected to bring record high levels of unemployment and a jobless rate of 7.4 percent. FY 1982 should yield some relief in the number of Mississippians lacking employment, but not to the point of complete recovery.

Employment gains over the next two Fiscal Years should be steady, slightly outstripping unemployment gains by FY 1982. Gains could be greater if the inflation rate were to show any signs of abating. The present combination of tight money and high interest rates is not conducive

to industrial expansion. The availability of new jobs is dependent on the ability of industry to expand production capabilities. Until the twin demons of inflation and high interest rates are brought under control, real economic recovery will remain a dream instead of a reality.

POPULATION AND LABOR FORCE CHARACTERISTICS AND TRENDS

POPULATION AND LABOR FORCE CHARACTERISTICS AND TRENDS

Mississippi's population is projected to reach 2,480,600 individuals in 1982, an increase of 11.9 percent above 1970 levels. Nonwhite minorities will number 927,360. In 1960, nonwhite minorities comprised 42.3 percent of the state's total population. By 1970, this percentage had fallen to 37.1 percent. The percentage of minorities is expected to increase slightly in 1982 to 37.4 percent of the state's population. Substantial increases are estimated to occur in those groups between the ages of 15 - 39. The largest growth is expected in all age groups of the total population except persons 5 - 14.

By FY 1982 children under eighteen years of age who are members of a family unit should number 820,350. Of this number, 326,450 will be from families with incomes below poverty level. Nonwhite minorities will comprise 75.1 percent of these disadvantaged children. About 23.0 percent of the low income children will be under 6 years of age. This is down from previous years because of a decline in population in the preschool age brackets.

The number of male veterans residing in the state should total 245,600 in FY 1982. Vietnam veterans will comprise approximately 25.3 percent while Korean and World War II veterans (142,180) will make up 57.9 percent. Veterans are projected to represent 29.8 percent of the male populace above 16 years of age.

The growth trend of the Mississippi labor force is expected to continue through FY 1982. In FY 1975 there were 917,800 persons participating in the labor force. Projections indicate that 1,043,200

individuals will make up the average civilian labor force for FY 1982. White males are estimated to number 400,390 or 38.4 percent of the total. Nonwhite minorities will comprise 31.0 percent while 472,670 female workers will account for 45.3 percent. The percentage of females in the labor force should continue to rise as more women seek employment to provide their families with an additional wage earner.

The percentage of the population participating in the labor force has shown an overall increase since 1970. The greatest increases were found among workers in their late teens. Females are expected to experience a greater increase over 1970 participation rates by 1982 than males. Overall participation rates are expected to drop only among white males, as all other groups should record increases. Projections indicate that despite the increase in the number of persons participating in the labor force by FY 1982, most of the new participants will be able to find work.

EMPLOYMENT DEVELOPMENTS AND OUTLOOK BY INDUSTRY

EMPLOYMENT DEVELOPMENTS AND OUTLOOK BY INDUSTRY

Total employment in Mississippi has grown steadily since FY 1975 when the number stood at 855,300 workers. During FY 1980 average monthly employment totaled 944,700 and is expected to reach 950,500 in FY 1981. Further growth to a level of 971,200 is expected by FY 1982. During the 1975-1980 period, the only decreases in employment were registered in the field of Agriculture.

Employment counted by place of work has followed a similar trend. In FY 75, manufacturing jobs represented 29.5 percent of the total establishment based employment. By FY 80, this proportion had declined to 27.0 percent. A slight gain is expected in FY 81 to 27.3 percent, and FY 1982 may show a further increase to 27.7 percent. Although the percentage has fallen, manufacturing jobs showed a continual increase from FY 1975 through FY 1979. A small decline was experienced in FY 1980, but projections indicate that gains in manufacturing employment should occur once again in 1981 and 1982.

Employment in Durable Goods production increased 9.0 percent between FY 75 and FY 80, primarily by Non-Electrical Machinery, Primary and Fabricated Metal Products and Furniture and Fixtures. Transportation Equipment, which employed 23,900 persons in FY 75 and ranked second among manufacturing industries had declined to 21,200 by FY 80 and now ranks fifth in total manufacturing employment. All segments of the Durable Goods sector should show some employment gains during the next fiscal year with the exception of Transportation Equipment.

The past few years have affected the individual industrial categories in different ways. Lumber and Wood Products, which gained 1,600 between FY 75 and FY 80, is projected to decline slightly in FY 81.

An upsurge in employment is expected in FY 82. The largest increase in number of workers is expected to occur in the Non-Electrical Machinery industry. This industrial group experienced losses in FY 76, but has regained momentum and should number approximately 15,500 in FY 82. The industry projected to experience the greatest percentage gain is also Non-Electrical Machinery.

Nondurable Goods, which is dominated by the Apparel industry, increased employment from 91,000 in FY 1975 to 100,100 in FY 1980. This was a net gain of 9,100 jobs. This trend is expected to continue and increase Nondurable Goods employment to 101,900 by FY 1982.

Although employment growth in Nondurable industries will probably not be quite as great as in the Durable industries, increases are projected for all but two of the categories. Apparel is expected to lose 200 jobs between 1980 and 1982, while Textile Products should lose 100 jobs. The two industries with the largest percentage of growth between FY 75 and FY 80 in the Nondurable Goods sector were Printing and Publishing (56.8 percent) and Chemicals (22.0 percent).

The Apparel industry, the largest manufacturing employer in the state, is projected to number 40,900 during FY 82. Although this is down from some previous years, the production of Apparel will still represent 17.4 percent of the state's manufacturing employment.

At the end of FY 80, there were still three manufacturing industries below FY 75 employment levels: Transportation Equipment; Optical Goods and Miscellaneous Manufacturing; and Petroleum, Rubber, and Leather Products. However, all of these are expected to show some gains by FY 1982 over present levels.

Nonmanufacturing industries, which provided 70.5 percent of the total

jobs in FY 75 and 73.0 percent in FY 80 should represent 72.3 percent of the total establishment based employment by FY 82. All industries achieved higher levels of employment in FY 80 than they had in FY 75. A total growth of 117,400 was experienced during this period. Another 4,900 jobs are projected to appear in this segment by FY 82.

The largest contributors to the growth in Nonmanufacturing have been Government, Wholesale and Retail Trade, and Service and Miscellaneous. The leader in percentage of growth during the 1975-80 period was Mining (63.5 percent). Much slower growth is projected over the next two fiscal years. Construction and Transportation & Public Utilities will likely show the biggest gains in employment between now and FY 1982. The Construction industry which has been hit by soaring costs and high interest rates should begin to recover somewhat by FY 82.

Overall employment appears to be improving with several industries projected to rise substantially. More manufacturing jobs would be helpful and are needed, but so many of the jobs in the expanding groups pay low wages. Growth in other areas such as Trade and Services, is dependent upon the economic state of other industries. Drops in employment reduce spendable income and lessen the demand for goods and services. The past trend toward increased Government employment may be reversed if current administration policies are allowed to be carried out.

Unexpected events such as fuel shortages, labor disputes, or natural disasters could also affect employment and severely limit growth and expansion throughout the state. The state of Mississippi's economy will also depend to a large degree on national conditions and resultant effects on local industry. A healthy national economy would be a boon to Mississippi's economic future.

EMPLOYMENT DEVELOPMENTS AND OUTLOOK BY OCCUPATION

EMPLOYMENT DEVELOPMENTS AND OUTLOOK BY OCCUPATION

Annual occupational needs for Mississippi for 1976-1982 indicate an annual demand for 53,520 workers. A large number (26,160) of these jobs will be replacements due to death, retirement, or other reasons such as disability or family responsibilites. New jobs and expansions will account for 27,350 openings. Over 21 percent of the new jobs will be in the Operatives Category. The largest number of replacement jobs is projected to occur in the Service occupations (4,690).

Replacements will number 26,160 per year through 1982. This represents 48.9 percent of the total average annual openings. Replacements are projected to outnumber expansions in all but three categories: Clerical, Craft and Kindred Workers and Operatives. These three areas normally provide a large number of jobs which are unskilled or semi-skilled in nature and can be filled by new workers entering the labor force.

During CY 1980, offices of the Mississippi State Employment Service received 111,080 openings. Most of these jobs were filled by the end of the year. The largest number of openings (24,760) were in Clerical & Sales. Service occupations followed closely behind with 24,230 openings. The lowest number of openings received were in the Machine Trades occupations (4,380). Nearly 84.0 percent of the total job orders received were filled. Professional, Technical, and Managerial openings were the hardest to fill. Only 50.5 percent of the openings in this category had been filled by the end of the year.

In 1980, large numbers of persons sought work through the Mississippi State Employment Service. Over half of the job applicants were either

female or minorities. Roughly seven out of ten applicants had work experience in some specific occupation.

The two occupation groups which had the largest number of applicants were Service and Clerical and Sales. These groups provided more than 40 percent of the total applicants throughout the year. It is interesting to note that over 80 percent of the applicants in these two groups were female. Large numbers of those applicants in service occupations were also nonwhite. Experienced applicants were also highest in these two groups. The percentage of openings filled for Clerical and Sales jobs was the third lowest of all categories in CY 1980. Since there are large numbers of applicants for Clerical and Sales jobs, this probably indicates problems in the applicants meeting requirements and job specifications as set forth by employers. Over half of the projected needs for each year through 1982 are in the Other Clerical subgroup which jobs require varied skills and experience. Usually the majority of clerical applicants are applying for jobs in the secretarial field. No shortages should occur in the secretarial occupations, but they are possible in other types of clerical work.

As projected, Retail and Wholesale Trade employment is expected to decline slightly during the coming year. This would indicate that applicants interested in sales work could have some problems in securing jobs. The location of probable opportunities and the ability to get to the job could be the important factors. Available jobs will more than likely be in the highly populated areas, and rural applicants would have to relocate or commute in order to secure work in these occupations.

A great number of workers in Mississippi will probably enter the labor force in the coming years in Operative jobs. These openings are primarily

of a semi-skilled nature and most can be learned through on-the-job training. The need for 5,020 workers annually in the Other Operatives sub-group, an area of employment which provides many jobs for Mississippians, should provide jobs for the largest number of entry workers. Although many of these jobs fall in the lower wage brackets, a goodly number are based on production and piece work which would offer wages in keeping with the individual worker's ability. The Dictionary of Occupational Titles (DOT) classifies many of the applicants in this group under Processing, Machine Trades and Bench Work occupations. Female applicants dominate in Bench Work, and nearly half of the total applicants for these type jobs in 1980 had no work experience. Openings in these occupational groups were highest during the third and fourth quarters of 1980. Projections indicate a continuing need for these semi-skilled workers through 1982 and many persons should be able to find employment in these jobs in the coming year.

As stated previously, a large number of jobs (5,650 annually) will be among Craft and Kindred workers. The Construction occupations, other than laborers, will represent 27 percent of this category. Projections indicate an annual need of 1,540 workers (740 Expansions and 800 Replacements). Structural work had 18,870 openings listed during 1980. Even though many of these jobs require previous experience or training, 85.9 percent were filled by year's end. Job openings in Structural work were high during the second and third quarters, providing employment for large numbers of applicants. Although apprenticeships are required for some of these jobs, no shortages are expected at the lower skill levels. Jobs in the crafts which require high levels of skill may experience some shortages. In 1980 jobs in Structural Work occupations also had the fourth

highest number of unfilled job openings. These jobs could be filled by Mississippians if they can receive necessary training locally. Many of the hard-to-fill jobs were craft related and projections indicate sizable needs through 1982 for persons possessing these skills.

Two areas which may provide some problem in the coming years are Professional, Technical and Kindred workers (7,290 openings annually) and Managers and Administrators (4,810 jobs annually). Both of these fields require a large amount of training and experience. Of these 12,100 openings, 6,510 will be replacements. In many of the Professional and Technical jobs, college training is a necessity. Managers and Administrators require experience coupled with additional education. Unless proper training in these fields can be obtained in Mississippi, the needs will have to be filled by out-of-state recruitment. Openings in these occupations were by far the hardest to fill with only 50.5 percent being filled in 1980. There seems to be a more than adequate supply of workers in this field with training and experience but a shortage of applicants who fulfill requirements set by employers.

Of the 110,080 openings received in all occupations, 83.7 percent resulted in placement. The 25,700 unfilled openings, of which 15,870 were unfilled for over 30 days, indicate that shortages do exist in some areas. Over 40 percent of the hard-to-fill openings were in Professional, Technical and Managerial, the category with the third lowest number of openings. This seems to indicate shortages of fully qualified applicants since Professional, Technical and Managerial occupations had a large number of persons registered. Clerical and Sales, with 14.7 percent of

the hard-to-fill openings, recorded a large number of inexperienced applicants in these occupations. In Structural Work occupations, 18 percent of total openings were unfilled and 15 percent were unfilled after 30 days.

Two areas of training which are helping in meeting the state's labor market needs are vocational training and CETA programs. Persons completing postsecondary and adult vocational training programs in FY 1980 numbered 9,429. There were sizable numbers in all but two occupational categories: Processing and Miscellaneous. A large number of jobs in these categories offer on-the-job training, and companies are continually hiring inexperienced workers at these entry level positions. Despite the more than 9,400 adults completing some type of post-secondary vocational training in the state in FY 1980, less than one-third were disadvantaged. There were only 123 handicapped individuals who completed training during this same period. Most of the disadvantaged were in Machine Trades, Structural Work or Clerical and Sales, while over half of the handicapped were in Clerical and Sales.

CETA training program participants numbered 25,810 during FY 1980. The different programs were: OJT Contract Placements (1,223), Public Service Employment - Title VI (2,512), Public Service Work - Title II (5,577), Work Training - Title II-B (1,549), Institutional Training (3,444), Summer Youth Programs (2,723), and Other Youth Programs (8,782). A large number of disadvantaged persons participated in these programs.

A total of 423 businesses made contracts with the government to train 1,223 individuals. Persons in this program were trained on the job by the employer to meet the company's specific requirements. The largest number of CETA workers were in the PSE program. Individuals working in Public Service jobs totaled 8,089 for FY 1980. These were employed by public

service organizations and not only received work experience but were also enabling local governments to provide additional services to citizens. Many of the tasks performed by CETA participants might seem meaningless to the public, but the experience of working and earning a pay check could prove invaluable to a disadvantaged person who otherwise might never receive the opportunity. The same is true of the individuals who are employed in work training projects.

CETA also provided for 3,444 individuals to receive vocational training at centers across the state. These students were trained in many of the same skills as regularly enrolled vocational-technical students.

Many disadvantaged youth annually gain experience during the summer months in CETA Summer Youth programs. If it were not for this training, many of the poor youth of Mississippi would leave school never having experienced any type of employment.

Both vocational training and CETA programs are attempting to provide a better trained labor force for the state. The question of whether or not these programs fill the needs of the coming years' labor market can only be answered by the employability of the participant when the time comes to find a job. Emphasis should be placed on Mississippians finding work in Mississippi.

Continuing efforts by training agencies to meet the needs of the employing community and provide meaningful training for enrollees should enable many Mississippians to find jobs within the state. Many individuals applying for work will be disadvantaged. Concentrated efforts by schools and training agencies through counseling and instruction are needed to prepare disadvantaged individuals for jobs which could bring them out of

poverty. Qualified workers able to meet requirements of employers will be in demand. Mississippi can only grow industrially if Mississippians are trained now to meet the needs of the 1980's.

TRENDS IN UNEMPLOYMENT

TRENDS IN UNEMPLOYMENT

Fiscal year averages and calendar year averages present different pictures of the unemployment situation. From the fiscal averages, a picture is drawn of an almost continual increase in the number of unemployed, while calendar year averages show alternate highs and lows. This alternating trend in the annual averages shows the peak year of unemployment to be CY 1975 (76,600). On the other hand, the peak fiscal years for unemployment were FY 1980 and FY 1978 (70,900).

Even though Mississippi's employing establishment is affected largely by national economic conditions and influences from other states, the unemployment rate has not fluctuated in the same way as the national rate. In 1975, both the national and state rates soared over 8 percent. In 1976, both dropped, but Mississippi's rate of 6.5 percent was much lower. In 1977, the state rate increased to 7.4 percent while the national rate dropped to 7.0 percent. In 1978, both rates again dropped, but this time the national rate was one percentage point lower than the state's. 1979 brought identical rates of 5.8 percent, while 1980 recorded rates of 7.4 for the state and 7.1 for the nation.

Much of the increase in unemployment can be attributed to the growth of Mississippi's civilian labor force. The establishment of new industry and expansion in existing industry have not been able to keep pace with this growth in the past few years. The additional problem of plant closings and employment cutbacks in areas with small amounts of industrialization have also placed some experienced workers among the unemployed.

Although nonwhites made up less than one-third of the labor force, they comprised over half of the unemployed during 1980. This trend of higher unemployment rates among nonwhites is a situation which has plagued those regions with large concentrations of minorities, such as the Delta

region of Mississippi, for several years. These same counties will experience significant problems among nonwhite youth due to a lack of industrial jobs. These areas are primarily agricultural and projections indicate that new jobs in this field are declining.

High unemployment will also be felt in other areas across the state. Commuting patterns, seasonal work, saturated industry, and a lack of enough new industry to meet growing labor force needs are the primary reasons for this high unemployment. Younger workers will still be hurt by inexperience and lack of training when competing for jobs with older, experienced workers. This problem will persist as long as there is a shortage of adequate new industry entering the state or expansions among existing industry to absorb the growing numbers of new and reentrants into the labor force.

The primary concentrations of unemployment during 1980 were in the northwestern and the east central areas of Mississippi. This pattern changed little throughout the year. The unemployed were dispersed throughout all industries during 1980 with Wholesale and Retail Trade, Service, Construction and Apparel manufacturing firms being the chief contributors. The northwestern quadrant, which includes the Delta, possesses many agricultural related jobs which are seasonal in nature as well as a large number of the state's Headstart activities that are closed during the summer months. A drop in the tourist trade has increased numbers of unemployed Service workers in the southeastern region along the Gulf Coast. Trade, Construction. and Apparel experienced similar problems throughout all sections of the State.

Unemployment experienced a substantial increase in 1980 and is

expected to go even higher in FY 81. Little change from the patterns of recent years is anticipated. Certain areas can expect to suffer extreme rates of joblessness just as they have in the past.

CHARACTERISTICS AND NUMBER OF INSURED UNEMPLOYED

CHARACTERISTICS AND NUMBER OF INSURED UNEMPLOYED

In 1980, insured unemployment fluctuated throughout most of the year. Males made up a majority of the total covered jobless during all but the third quarter of the year. The largest number of jobless males each quarter were Structural workers. Those workers aged 21-34 represented over half of the total covered unemployed each quarter. During 1980, more males experienced long-term unemployment than females.

During the first, third, and fourth quarters, the larger percentage of claimants were unemployed for 5-14 weeks. This was true of all race and sex groups. The second quarter was characterized by shorter durations of joblessness for most groups. Approximately two-thirds of the total number of female claimants in 1980 were bunched in three occupational groups: Clerical and Sales, Bench Work and Professional.

Nonwhite claimants outnumbered white claimants in all but the first quarter. Males outnumbered females in each quarter of the year. The highest number of claimants each quarter were in the 25-34 year age bracket.

The industrial groups which contributed the greatest number to unemployment totals in 1980 were Apparel, Wholesale and Retail Trade and Service and Miscellaneous. These three groups experienced large totals throughout the year while several other groups contributed significant numbers during individual quarters. Most of these were the result of short-term mass lay-offs occurring during the quarter. This can be evidenced by sizable decreases in succeeding quarters. Seasonal industry trends also contributed to the overall variation.

EMPLOYMENT SERVICE UNFILLED JOB OPENINGS

EMPLOYMENT SERVICE UNFILLED JOB OPENINGS

During CY 1980, the offices of the Mississippi State Employment Service received 111,080 job openings. By the end of the year 92,980 of these openings had been filled. The percentage of openings which were filled increased each quarter with 83.7 percent of all openings received being filled by the end of the year.

The total number of unfilled job openings were highest in the first and third quarters during 1980. The largest number of jobs unfilled was in the Professional, Technical and Managerial category during the twelve month period. The vast majority of these jobs remained unfilled for 30 days or more. During this period, Professional, Technical and Managerial work accounted for 6,610 openings received and 3,340 placements. Openings in this field were by far the hardest to fill throughout 1980.

Clerical and Sales occupations accounted for the next largest total of unfilled job openings (4,880). Clerical and Sales jobs unfilled for 30 days or more numbered 2,330. Although this total appears to be fairly high, by year's end 79.6 percent of openings received in this category had been filled.

Service occupation openings remained high throughout the year and realized an 88.2 percent placement rate for the year. Approximately 2,030 openings in Service were unfilled after 30 days but this represented only 8.4 percent of the total openings in this category.

Although Processing provided the second fewest number of openings (4,450) for the year, 3,950 placements were made. Of the 620 unfilled openings in Processing, only 350 were open for 30 days or more.

Machine Trades jobs accounted for both the fewest openings and fewest placements in 1980. This category also had the second lowest number of unfilled openings (1,170). Long term openings numbered 710 or 60.7 percent of total unfilled.

Benchwork job openings totaled 10,920, while unfilled openings numbered 1,840 during 1980. Hard to fill openings totaled 990, for a 53.8 percent share. Miscellaneous jobs recorded 1,690 unfilled openings despite an almost 90.0% placement rate for all openings received.

The Occupational Employment Statistics program provided information on current and future occupational needs. OES projections indicate an annual need of 53,520 workers through 1982. These openings will be necessitated due to expansions (27,350 jobs) and replacements (26,160 jobs). In only three categories are expansions expected to outnumber replacements: Service Workers, Craft and Kindred Workers and Operatives. These categories have many jobs which are accessible for entry workers through either on-the-job training or apprenticeship programs. In all other categories replacements will represent the greater number.

In several categories, the large number of replacements is worth noting. There will be an annual need of 4,690 replacements among Service Workers. This will be 50 percent of the total need in this group. Non-farm Laborer needs will be 58 percent replacement. This field also has a large number of entry level jobs and few problems are anticipated here. The other group with a large percentage of replacements is Sales Workers.

The Professional, Technical and Kindred Workers and Managers and Administrators categories are two areas which may cause some concern.

A total of 12,100 openings per year are expected in these groups through 1982. This represents 22.6 percent of the total annual needs of the State. These were the hardest to fill openings during 1980.

In the coming year, little problem is anticipated in filling most industrial jobs. Some shortages may occur in those jobs with high skill levels in the rural areas, but little shortage is anticipated statewide. With approximately three-tenths of the total applicants available in 1980 having no experience, those jobs at entry level will be very competitive. Some problems may occur in meeting requirements as set forth by employers, but this is expected at higher levels of employment where experience and know-how are basic requirements.

Many of the job applicants during 1980 were either out of work for a short period of time or were employed and looking for an occupational change. Many jobs which were made available to these workers were either low-paying or possessed unsuitable working conditions. Distance from work is still a problem in the rural areas of Mississippi where a large number of the lower economic level population lives. Ability to meet local employers' job specifications and accessibility of transportation to and from work will be obstacles which many have to overcome.

Probably the most concern will be centered on those jobs which are of a Professional, Technical or Managerial nature. In 1980 sizable numbers of workers applied for available openings. There were about two applicants for every job order in this field, yet only 50.5 percent of the total openings were filled. Unless sufficient training is made available in areas where possible Professional, Technical and Managerial openings are located, employers will have to recruit outside Mississippi to meet their needs.

A continual demand for jobs of a Professional, Technical and Managerial nature and jobs which possess high skill levels will exist through 1982. Better preparation and knowledge of locally available job possibilities could help more workers find an area of profitable endeavor in coming years.

ESTIMATE OF NEEDS FOR MANPOWER SERVICES

ESTIMATE OF NEEDS FOR MANPOWER SERVICES

The continued growth in Mississippi's civilian labor force will necessitate much employment-related assistance during FY 1982. Many young people will be in need of counseling in order to recognize where their best opportunity may be. Of the 971,200 projected employment for FY 1982, 37,190 will be working part-time for economic reasons. These people are experienced but are not being utilized to their full capacity. Large numbers of the total unemployed will also seek assistance in finding new areas of employment.

The growing numbers of youth and females entering the labor force with little or no experience will have to be prepared to meet the demands of employers. Openings at the entry level will probably be small in comparison with the number of applicants competing for them. Some displaced workers may also be taken into account here as they pursue new job possibilities after long-term unemployment.

Projections indicate that 64,830 of the unemployed workers in FY 1982 will have some work experience. Many of these will be filing for unemployment compensation while others will be reentering the labor force. This latter group may need some help in order to bring them up to date on job possibilities and changes in the labor market which may have occurred since they were last employed.

The majority of unemployed males with work experience will be Craftsmen, Operatives, and Laborers. Over one-third of the projected unemployed females will have work experience in the Operatives occupations. A good number of these experienced workers will probably have some job attachment and plan to return to the same job upon termination of unemployment. Others will seek new employment due to permanent loss of

job or the change for better working conditions. Many family heads will be unemployed during the year, leaving many households without adequate income. Some of these individuals will require counseling and placement services to secure jobs for family support. Many persons 65 and older will need additional help to overcome small incomes and a lack of suitable jobs. Some older workers will probably leave the labor force due to the latter.

Employment assistance for Vietnam veterans will still be in demand in FY 1982. Although the unemployment rate for these veterans has been lower the last few years in Mississippi than it has been nationally, there will still be 2,280 Vietnam veterans out of work in FY 1982. Three specific veteran groups may require special attention in order to achieve any positive employment activity during the coming year. All veterans under 30, white and nonwhite, are projected to experience higher degrees of unemployment than those over 30. Nonwhite Vietnam veterans are projected to have to cope with a rate of 6.5 percent. Younger nonwhite veterans, those under 27, are projected to have a rate of 11.8 percent. Disabled Vietnam veterans under age 27 will probably require additional help to meet the problems which continually beset them in trying to find suitable employment. The unemployment rate for this group (11.1 percent) is projected to remain high.

Some assistance will be needed to help those individuals working less than a full year. Less than half of the males 16 and over (41.3 percent) will work 50-52 weeks in FY 1982. Approximately three-tenths are projected to not work at all during the year. Females will possibly experience some of the same problems. Of the 942,780 females above 16 years of age, 499,560 will work sometime during FY 1982. Approximately

41.6 percent of those women who work at all will work 50-52 weeks, while 9.7 percent of the employed women are projected to work 13 weeks or less.

Young men 16-24 years of age are expected to experience a high degree of joblessness in FY 1982. Projections indicate that only 31.3 percent of white young men will work 50-52 weeks, while only 15.6 percent of nonwhite males aged 16-24 will experience that much employment. A larger percentage of white females in this age group will work 50-52 weeks than nonwhite females. Almost 50.0 percent of all young females who will be employed in FY 1982, will work less than 40 weeks. Young males working less than 40 weeks will number 66,030, or 48.0 percent of the total employed male workers aged 16-24. Some 76.9 percent of white males aged 25-64 are projected to work at least 40 weeks, while only about half of like-aged nonwhites will work that many weeks.

A total of 39,650 males over age 64 will be employed at sometime during FY 1982. Roughly four out of ten employed white males over 64 will work 50-52 weeks while 56.1 percent of the employed nonwhite males over 64 will work less than half the year.

In FY 1982, the largest number of working women will be in the 25-39 year age group. About 87.0 percent of whites and 81.4 percent of the nonwhites, in this age group who work at all will work over 26 weeks. Those women aged 40 to 59 who work 50-52 weeks in FY 1982 will make up about 36.2 percent of this age group (63,020 whites and 27,940 nonwhites).

Most of the women 60 and over are not expected to work at all in FY 1982. Of those who do seek employment, 7,690 are projected to work 13 weeks or less. Most of these will be white. Some 72.9 percent of the older women workers who work 50-52 weeks are also projected to be white.

A large number of the aforementioned age and racial groups will require employment assistance in FY 1982. Many of the youth are inexperienced and will desire information and training to enable them to find the best possible employment. The growth in labor force part-time workers seeking full-time jobs, displaced workers looking for a change, new entrants into the labor force, and normal turnover patterns should increase the need for more and better training by employment and training agencies. A better educated work force, knowledgeable in what jobs are available and where they are located, would be a boon to the state. New industry and expansion of established companies will necessitate further training in skills and technology for Mississippi's growing labor force.

CHARACTERISTICS OF THE ECONOMICALLY DISADVANTAGED

CHARACTERISTICS OF THE ECONOMICALLY DISADVANTAGED

An expected 771,710 Mississippians will exist on incomes below the poverty level in FY 1982. The majority (69.2 percent) of the state's poor will be nonwhite. There will be a total of 96,990 family units under the poverty level including 326,450 related children under 18 years of age. Unrelated persons who are economically disadvantaged will total 97,740 and those people over age 65 living in poverty are projected to number 108,730.

Persons 14 and above receiving welfare income are expected to total 139,200 in FY 1982. Nonwhites are projected to represent 68.5 percent of this number. Nearly two-thirds of the welfare recipients 14 and above are female. Nonwhite female welfare recipients are projected to total 64,150.

Male heads of household in poverty will number 85,870. Some 49,550 will be employed while 25,990 will not participate in the labor force. Female family heads 16 years or older with children under six will total 16,180. Two-thirds of these women will be nonwhite. Nonwhite families with female heads of household which are below poverty will represent 56.2 percent of all the female-headed families.

A total of 37,190 persons are expected to be employed part-time for economic reasons -- 21,280 white and 15,910 nonwhite. Female part-timers are projected to account for 54.0 percent of the total.

Almost two-thirds of the nonwhite related children under 18 years of age will live in a poverty environment. More than eight out of ten children in families headed by females will exist below the poverty level. Many of these women will not be able to secure work because of family responsibility.

A large number of older individuals will probably be counted among the Mississippi's poor. Just under half of all poor persons over age 65 will be nonwhite minorities. Some 36.1 percent of all older persons will have sub-poverty level incomes.

A significant number of persons not related to a family will also live below poverty level in FY 1982. These people will be among the 336,530 poor individuals between the ages of 18 and 65 that will possibly be in search of work next year. These people will not only be searching for work, but will have the additional burden of existing on a limited income while doing so.

CHARACTERISTICS AND NUMBER OF UNEMPLOYED

CHARACTERISTICS AND NUMBER OF UNEMPLOYED

In FY 1982, projections indicate that an average of 72,000 workers will be unemployed monthly. There will probably be 217,900 different individuals counted in this number during the year. The long-term unemployed, those persons out of work for 15 weeks or more, is projected to total 17,020 individuals.

The highest rates of unemployment will be experienced by those workers between the ages of 16 to 24. Nonwhite females in this age group will probably have the highest rates of all with 37.0 percent of the 18-19 year olds out of work.

Of the 217,900 different individuals who will experience some degree of unemployment in FY 1982, females aged 20-24 will have the largest total (28,980). Nonwhite women will be more affected than white females. Another group of workers projected to have employment problems are males in the same 20-24 year age group. White males in the 25-34 year range will also account for large numbers of the unemployed.

The long-term unemployed will probably have a larger number of males than females. Projections indicate that more nonwhite females will be out of work for long periods of time than any other group. Nonwhite males who endure long term joblessness are expected to outnumber whites by better than two to one.

In a reversal of previous trends, Mississippi's Vietnam-Era veterans should not experience any more severe employment problems than non-veterans of the same race and age. The highest levels are expected to be experienced by those veterans under the age of 30. As is true in the other categories, nonwhite veterans in this age group will have a higher percentage of

unemployment than their white counterparts although the totals are lower. Only 10 out of 90 disabled Vietnam veterans are projected to be jobless in FY 1982 for a rate of 11.1 percent.

A considerable number of family heads are projected to be unemployed during FY 1982. Of the male heads of household between the ages of 14 and 64, a total of 28,700 may be unemployed. Whites will slightly outnumber nonwhites. Most of the unemployed nonwhite male family heads should have incomes below the poverty level.

The experienced unemployed in FY 1982 should number 64,830 workers. A majority of these will probably be females. Operatives, Craftsman, and Laborers will contribute 76.0 percent of the total experienced males who are unemployed. The greatest number of white males will be in Craftsman occupations, while the largest groups of nonwhite men experiencing unemployment will be Operatives and Laborers. A total of 34,460 females with work experience will also be out of work during the year. By far the largest occupational group of unemployed women will be Operatives, although a sizable number of nonwhite females will be out of work Service occupation employees.

Projections indicate that 110,760 workers will be employed for 13 weeks or less during the coming year. A small majority of this number will be males. The males in this category should number 62,200 with 45.0 percent of that number being young men aged 16-24. Women in this age bracket will probably experience the same problem with a projected 21.3 percent of those who work at all being employed for no more than 13 weeks.

BARRIERS TO EMPLOYMENT OF THE ECONOMICALLY DISADVANTAGED

BARRIERS TO EMPLOYMENT OF THE ECONOMICALLY DISADVANTAGED

Difficulties in securing adequate employment will still beset many of the economically disadvantaged workers in Mississippi in FY 1982. Many of the poverty stricken young people lack the education and skills which are needed to become part of the working class. Occupational groups which usually provide employment possibilities for disadvantaged youth--Operatives and Laborers -- are due to have large amounts of unemployment again next year. Competition with experienced workers may be more than that with which many of these young people are prepared to deal. The absence of adequate transportation to and from work will probably cost many of the disadvantaged a job. They can neither afford to own nor operate a car. This problem could severely limit job possibilities.

With a large number of the disadvantaged traditionally working in seasonal agricultural jobs, adequate training must be established to further enhance the employment possibilities of these low-income families. During the past several years, only a small percentage of all adults receiving vocational training have been disadvantaged. There are training facilities located throughout Mississippi, but much of the training activity is done in localities that are highly industrialized. Most of the disadvantaged live in areas of low industrialization and would probably have to leave home in order to secure this training.

CETA programs have assumed some of the burden of training these individuals; but unless they receive training which will help in securing regular employment, many will have no better job prospect than before they were enrolled. Many youth who are enrolled in programs of this nature have parents who do not work. This lack of an example to follow as well as the psychological effect of seeing their parents able to live without having to work may keep many young people from applying for jobs when competition

becomes high.

The establishment of Job Corps Centers in Mississippi, along with special CETA programs in certain areas, has helped to some degree. Still, if a disadvantaged youth is trained for work that is not available in the area where he or she lives, then leaving home becomes a prerequisite for obtaining work. This is something many disadvantaged youth are reluctant to do.

School dropouts are high among low income families, and with new entrants into the labor market daily, persons with little or no educational background bear a severe handicap.

There will be approximately 53,520 jobs available in Mississippi each year through 1982. However, without education, training, and a willingness to work, individuals from poor families will find it hard to rise above the poverty level.

APPENDIX

GLOSSARY OF TERMS AND ABBREVIATIONS

TERMS

APPLICANT	A person who has registered with an Employment Service office for referral to suitable job openings.
CIVILIAN LABOR FORCE	The total of all employed and unemployed persons, 16 years of age and older, excluding military.
CLAIMANT	A person who has filed for unemployment compensation through the Employment Security Commission.
COVERED EMPLOYMENT	Employment in establishments subject to make contributions, based on their payroll, to the Employment Security Commission under provisions of the Employment Security Law.
DISADVANTAGED	Having income below the level of poverty as set by the U. S. Department of Health, Education and Welfare.
D. O. T. CODE	A code number from the Dictionary of Occupational Titles assigned to an occupation on the basis of functions performed.
EMPLOYED	Working for wages or other remuneration, or having a continuous job attachment.
ESTABLISHMENT BASED EMPLOYMENT	The number of employed persons computed by place of work within a specified geographic area.
FISCAL YEAR	Through FY 1976, the period from July 1st of the previous calendar year through June 30th of the designated year. From FY 1977 to the present, the period from October 1st of the preceding calendar year through September 30th of the designated year. For example, FY 1972 runs from July, 1971 through June, 1972. FY 1977 runs from October, 1976 through September, 1977.
INSURED EMPLOYMENT	See COVERED EMPLOYMENT.
INSURED UNEMPLOYED	The total of all persons without jobs who are receiving unemployment compensation as a result of previous employment by a firm subject to make contributions to the state unemployment compensation fund.

NONAGRICULTURAL WAGE AND SALARY EMPLOYMENT	The total number of persons working in non-agricultural establishments during any part of the pay period which includes the 12th of the month.
OCCUPATIONAL EMPLOYMENT STATISTICS	A program whereby employment by industry is used in conjunction with 1970 census staffing patterns and national changes to determine employment by occupation. A current employment survey is also being used to develop new staffing patterns.
PARTICIPATION RATE	The percentage of the population 16 years or older who are working or seeking work.
PRIME SPONSOR	An Agency under contract to the federal government to plan and administer programs under the Comprehensive Employment and Training Act.
RESIDENCE BASED EMPLOYMENT	The number of employed persons computed by place of residence within a specified geographic area.
SEASONALLY ADJUSTED	Adjusting basic data to remove seasonal patterns and/or fluctuations in order to determine current underlying trends.
STANDARD METROPOLITAN STATISTICAL AREA (SMSA)	A term applied to counties or aggregations of counties which have one or more central core cities and meet specified criteria of population density, commuting patterns, and socio-economic integration.
UNEMPLOYED	Not working, or without a continuing job attachment but actively seeking employment.
UNEMPLOYMENT COMPENSATION (UC)	Money payable to an individual with respect to his unemployment as covered under the Employment Security Law.
UNEMPLOYMENT INSURANCE (UI)	A program, administered by the State and financed by quarterly contributions from employers, whereby weekly benefits are paid to eligible individuals who are involuntarily unemployed.
UNEMPLOYMENT RATE	The percentage of the civilian labor force who are classified as unemployed.
VIETNAM-ERA VETERAN	A veteran of military service who served any time between August, 1964 and May, 1975.

ABBREVIATIONS

CETA	Comprehensive Employment and Training Act
